PROJECT PRISM

Global Revenue Intelligence Engine

Phase 1: Win/Loss Analysis

Leadership Team

Pete Mansel (CRO)
Mike Duda (VP RevOps)
Brad Towers (SE Lead UK/ANZ)
Steve Logan (CIO)

CONFIDENTIAL

Data Rich, Insight Poor

Thousands of data points across global regions, but our Win/Loss intelligence is manually dependent. Deal review notes and competitor intelligence are locked in text fields — impossible for our teams to manually read and synthesize everything.

We need automated intelligence to surface patterns, detect at-risk deals, and guide strategic revenue decisions in real-time.

Deals At Risk

AI-Driven Revenue Intelligence

1

Ingest

Pull raw text from Win/Loss notes and Deal Review forms automatically

2

Analyze

Use LLMs to read context, sentiment, and nuance across every opportunity

3

Synthesize

Aggregate into structured themes, cluster win/loss reasons by region

4

Report

Deliver weekly Global Intel Report — dashboard + auto-gen deck for ELT

Win/Loss Intelligence MVP

- **Win/Loss Theme Analysis**
  Region breakdown of why we win/lose
- **At-Risk Deal Detection**
  AI scans for risk markers in notes
- **Competitor Intelligence**
  Auto extraction of competitor mentions
- **Market Signal Detection**
  Early detection of emerging objections

Data Sources

SFDC Win/Loss Notes, Deal Review Forms

Outputs

Interactive Dashboard, Auto-gen PPTX, Email

Regions

NA, UK, ANZ

Report

Generate outputs

Batch Processing: 20-30 Opportunities per Run

Our system processes Win/Loss data in manageable batches to ensure consistent quality, avoid rate limits, and maintain audit trails. Each batch is tracked from ingestion through reporting.

Weekly Global Intel Report

Top Win Themes

- AI-powered analytics
- Speed to deploy
- Enterprise integration
- ROI clarity

Top Loss Themes

- Implementation complexity
- Cost vs. alternative
- Timing mismatch
- Security concern

Report includes detailed regional breakdowns, competitive positioning, and actionable insights for leadership reviews.

Workstreams & Ownership

Workstream	Responsible	Accountable	Key Deliverable
Data Schema & Export	Mike / RevOps	Pete	SFDC definitions, CSV automation
Data Pipeline	Brad / SE	Pete	Parser, normalizer, PII flagger
LLM Analysis Engine	Brad / SE	Pete	Provider layer, prompts
Report Generation	Brad / SE	Pete	Dashboard, auto-gen PPTX, email
Security & Hosting	Steve / IT	Steve	Privacy review, hosting, API keys

Phase 1 — 4-Week Sprint

Week 1

- Define schema
- CSV export setup
- Security review
- Begin pipeline build

Week 2

- LLM provider layer
- Prompt engineering
- Batch processing
- Hosting decision

Week 3

- Dashboard build
- PPTX report build
- Historical data test
- Validate with RevOps

Week 4

- ELT presentation
- Feedback & iterate
- Deploy automation
- Retrospective

Target: First Global Intel Report delivered Week 4

Data Privacy Considerations

Action Required

- Review LLM API data privacy policies
- Validate data residency requirements
- Obtain legal & compliance sign-off
- Document data handling agreements

Built-in Safeguards

- PII scrubbing in pipeline
- No customer data in prompts
- Secure environment variables

Architecture Mitigations

- Provider-agnostic for on-prem option
- Data minimization by default
- Comprehensive audit logging

Let's Make It Happen

Mike

VP RevOps

- Define field list
- Create CSV export
- Share sample data

Brad

SE Lead UK/ANZ

- Build pipeline
- Build LLM engine
- Deliver prototype

Steve

CIO

- Data privacy review
- Hosting decision
- API key mgmt

Pete

CRO

- Sponsor & blockers
- Define ELT needs
- Present to ELT

Target: First Global Intel Report delivered Week 4
