Project Prism — Revenue Intelligence Engine

Data Team Brief · February 2026

What is Prism?

AI engine that ingests Salesforce opportunity data and produces structured revenue intelligence — deal health, risk signals, win/loss themes, competitor intel, and executive briefings.

What's Built

- React dashboard (live on Firebase)
- LLM analysis pipeline (Claude/Gemini/OpenAI)
- CSV parser with Salesforce field mapping
- Simpro sales stages & MRR calibration
- Regional aggregation & reporting API

What We Need From You

Format: CSV extract from BigQuery

Scope: All opps from past 12 months (Won, Lost, Active)

Revenue field: Expected MRR (preferred) or Amount

Key fields: Opp ID, Name, Account, Stage, Close Date, Owner, Region, Loss Reason, Competitor

Nice to have: Last Activity Date, Manager Notes, Lead Source, Product Interest

Cadence: Weekly (ideally Monday mornings)

Full field spec: Prism-Data-Requirements-Spec.docx

Next Steps & Timeline

What happens once we get the data

Week 1

Break Things

- Ingest real CSV into pipeline
- Map BigQuery columns to Prism fields
- Run first LLM analysis batch
- Identify data gaps & edge cases

Week 2

Fix & Tune

- Refine LLM prompts with real data
- Calibrate MRR thresholds
- Build regional aggregation
- Fix parsing edge cases

Week 3

Demo Ready

- End-to-end pipeline working
- Dashboard showing live intel
- Weekly automation configured
- Demo to Pete & stakeholders

The Ask: A quick-start CSV with ~50-100 recent opportunities so we can validate the pipeline. Full extract to follow.
